➤ GREEN LIGHT FOR REDRUTH LEDS

Up to 80 of Cornish town's historic sites will be lit as part of heritage regeneration

A Cornish town hopes to make history by lighting the exteriors of its most important buildings with LEDs. 'We believe this project, which will eventually encompass up to 80 buildings in Redruth town centre, will be one of the largest undertaken in the UK,' says John Allard, technical director at Greenled, which will supply the lighting paid for through the Redruth Economic Arts Partnership. The lighting for each building, which will mainly be white, will take less than 100 Watts, the company says. Anne Pascoe of REAP says LEDs suit 'the Heritage Economic Regeneration Scheme, which has been a major factor in the town's regeneration' and that 'they will highlight Redruth's architecture beautifully while keeping energy usage to an absolute minimum'.
